FOR IMMEDIATE RELEASE
NOVEMBER 10, 2026

MaxxLogix Ships Outcome Cloud™ V2 with MaxxOwl™ SI, N-Way Match™, MaxxLaunch™ and Private AI Options

Second major release adds a choice of public, private, or hybrid language models, new Business Connectors™, and expanded international sales.

MELBOURNE, FL, UNITED STATES, November 10, 2026 — MaxxLogix today announced the general availability of Outcome Cloud™ V2, the second major release of its unified platform for workflow, intelligent document processing, content management, digital intake, and analytics. V2 introduces MaxxOwl™ SI, N-Way Match™, and MaxxLaunch™, adds 12 Business Connectors™, and lets customers run AI on public language models or on private and hybrid models that keep data inside their own boundary.

"We've built nonstop since our July launch, and V2 is the result," said Bruce Malyon, Founder and CEO of MaxxLogix. "Customers told us they want AI that knows their business and a clear answer to where their data goes. V2 gives them both, and it stays focused on what they're actually buying: business outcomes."

What's new in Outcome Cloud™ V2

- **MaxxOwl™ SI.** The Strategic Intelligence layer answers plain-language questions across documents, MaxxLaunch™ submissions, and connected data. It summarizes and compares documents and flags exceptions and trends. Answers respect each user's permissions and cite their sources.
- **Public, private, and hybrid language models.** MaxxOwl™ SI works with public models as well as MaxxLogix private and hybrid options. Policy-based routing sends each workload to the right tier, so regulated data can stay in the customer's environment.
- **Document pipeline and RAG engine.** IDP Outcomes™ classifies, extracts, and validates content at scale. That content feeds the MaxxLogix retrieval-augmented generation (RAG) engine behind enterprise search and MaxxOwl™ SI analysis.
- **N-Way Match™.** Takes 3-way AP matching further by checking invoices against POs, receiving records, contracts, change orders, freight bills, line-of-business data, and e-form submissions in a single pass. It is included in the Professional tier and above.

- **MaxxLaunch™.** The digital intake engine for e-forms, signatures, surveys, and acknowledgement and consent. Every submission goes into Outcome Repository™ and starts the right Outcome Workflow™.
- **Business Connectors™.** 12 connectors, including QuickBooks, Stripe, Google Drive, Google Sheets, Salesforce, Dropbox, Box, PostgreSQL, Zendesk, OneDrive, Zoom, and PayPal. DocuSign, Adobe Sign, and Slack connectors will be released before the end of 2026.

> "V2 is about giving customers a choice in how their AI runs, without giving up control," said Raghav Gaopande, Chief Technology Officer of MaxxLogix. "Every document goes through the same pipeline: capture, extraction, and validation, then indexing for our RAG engine. Whether a customer uses a public model or keeps everything private, MaxxOwl™ SI is working from the same governed content, under the same permissions, with every answer traceable to its source."

Expanding beyond North America

With V2, MaxxLogix is expanding sales outside North America, led by Vineet Sharma, SVP of International Sales. The company is building partner and customer relationships across Europe, Asia, and Australia. Regional deployment options help organizations meet local data residency requirements.

> "Outside North America, the first question is usually where the data will live," said Vineet Sharma. "V2's private and hybrid options give us a clear answer, and unlimited-user licensing makes the platform easy to roll out across a whole organization. We're now working with partners in Europe, Asia, and Australia to bring Outcome Cloud™ to their markets."

Availability

Outcome Cloud™ V2 is available now through MaxxLogix and its authorized solution partners. Like the original release, it is licensed by capacity with unlimited users. For more information, visit www.maxxlogix.com.
